

Medical Foundation Courses

The Abbey College offers an exclusive and unique Foundation Programme for Medicine and Dentistry courses at renowned universities in the Czech Republic, at the heart of the European Union. These courses are taught entirely in English and are recognised for Full Registration in countries worldwide, including by the General Medical Council of London. This, combined with the lower cost of the courses and cost of living, makes them a serious alternative to courses at British universities. Entry is guaranteed following successful completion of the course at The Abbey. For full details, please visit our sister website www.cmucas.com

Student Profile	
Name:	Rhiannon Killingbeck
Age:	24
Nationality:	British
Course:	Foundation (Medicine)

I have always wanted to study Medicine, so naturally I took the chance to take the Foundation year here at The Abbey College before going on to the Medical degree course at Charles University.

The teaching here is of a high standard, which together with the small classes has really helped me to get back into studying well. As an adult I do enjoy greater freedom than other schools could give me. The fact that all the facilities are available on one campus is also a big plus.
